

Title  
MrBuggy 3 - basic functionality and layout

Charter  
The aim of this exploratory session is checking whether the UI is created according to specification and checking usability of the app. Other aims involve establishing how much RAM the app uses and whether it can generate a report.

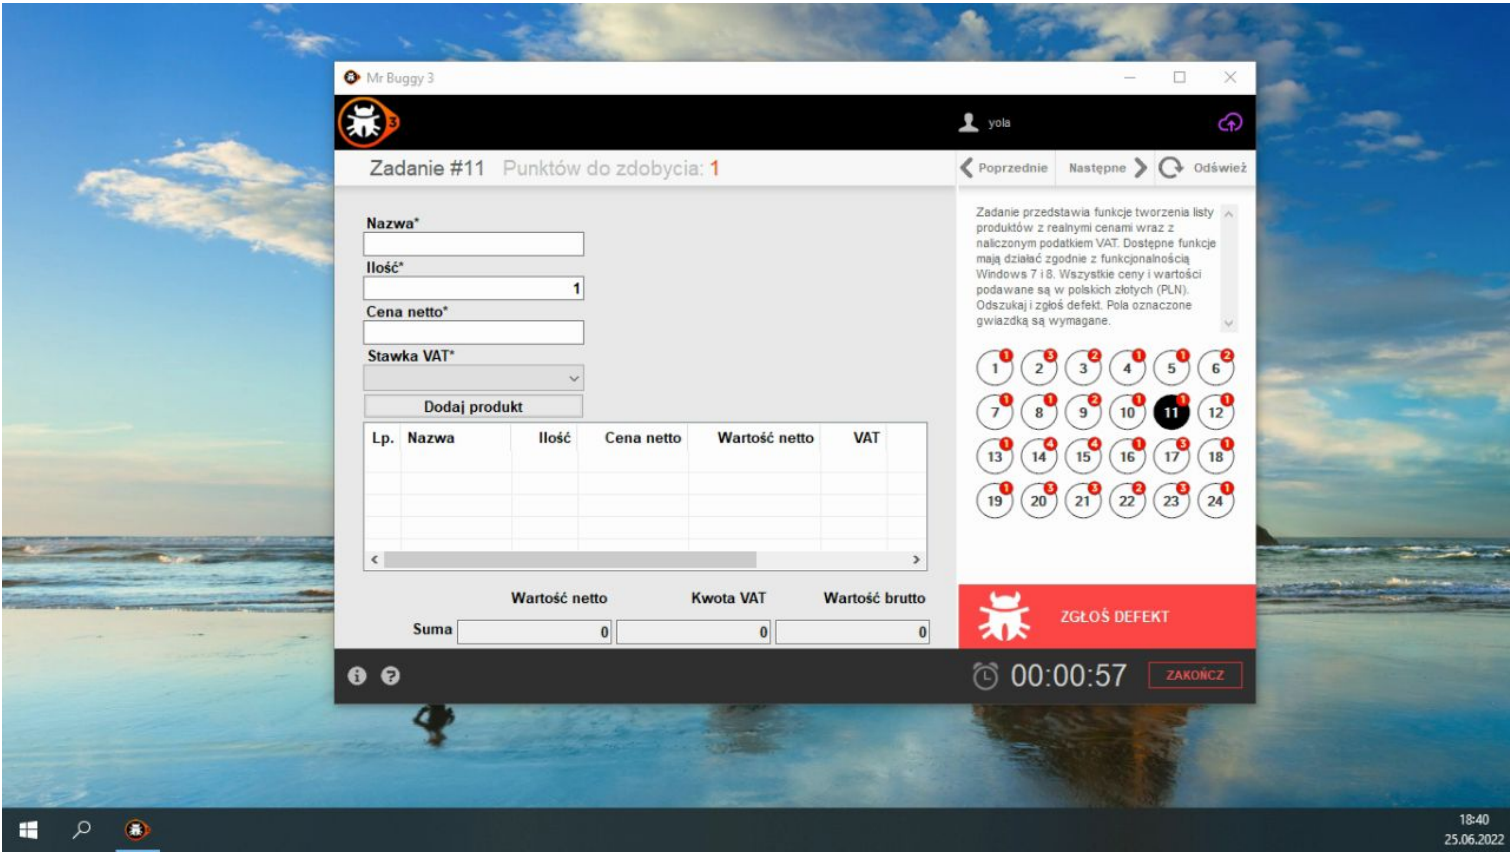

Preconditions  
No preconditions defined

Session started • Duration 00:23:47 18h38 | 25-06-2022

00:00:22 | Note • Comment

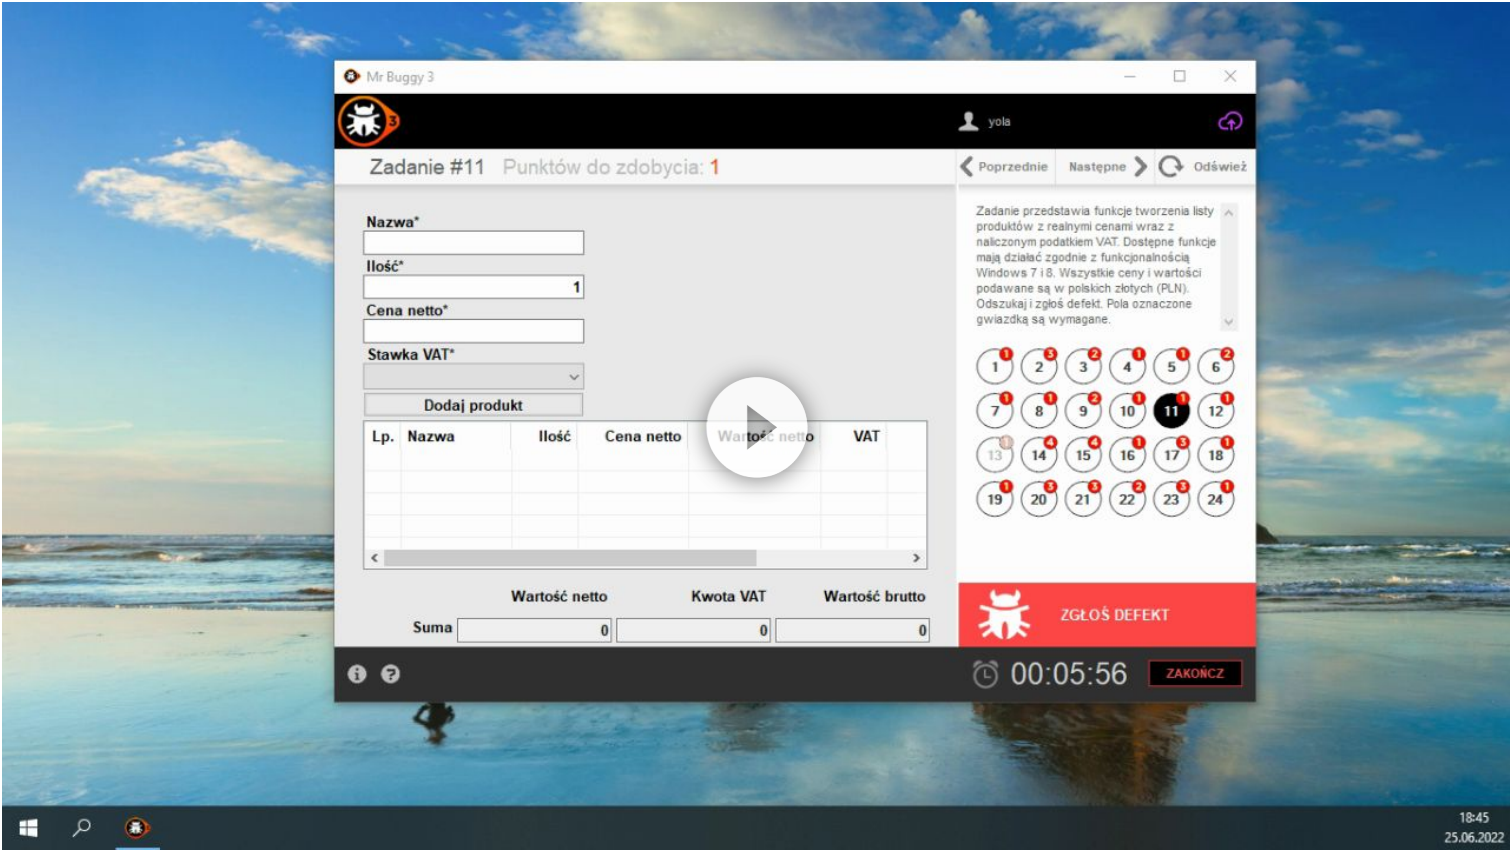

I'll be using a registered account first.

00:05:11 | Screenshot • Comment

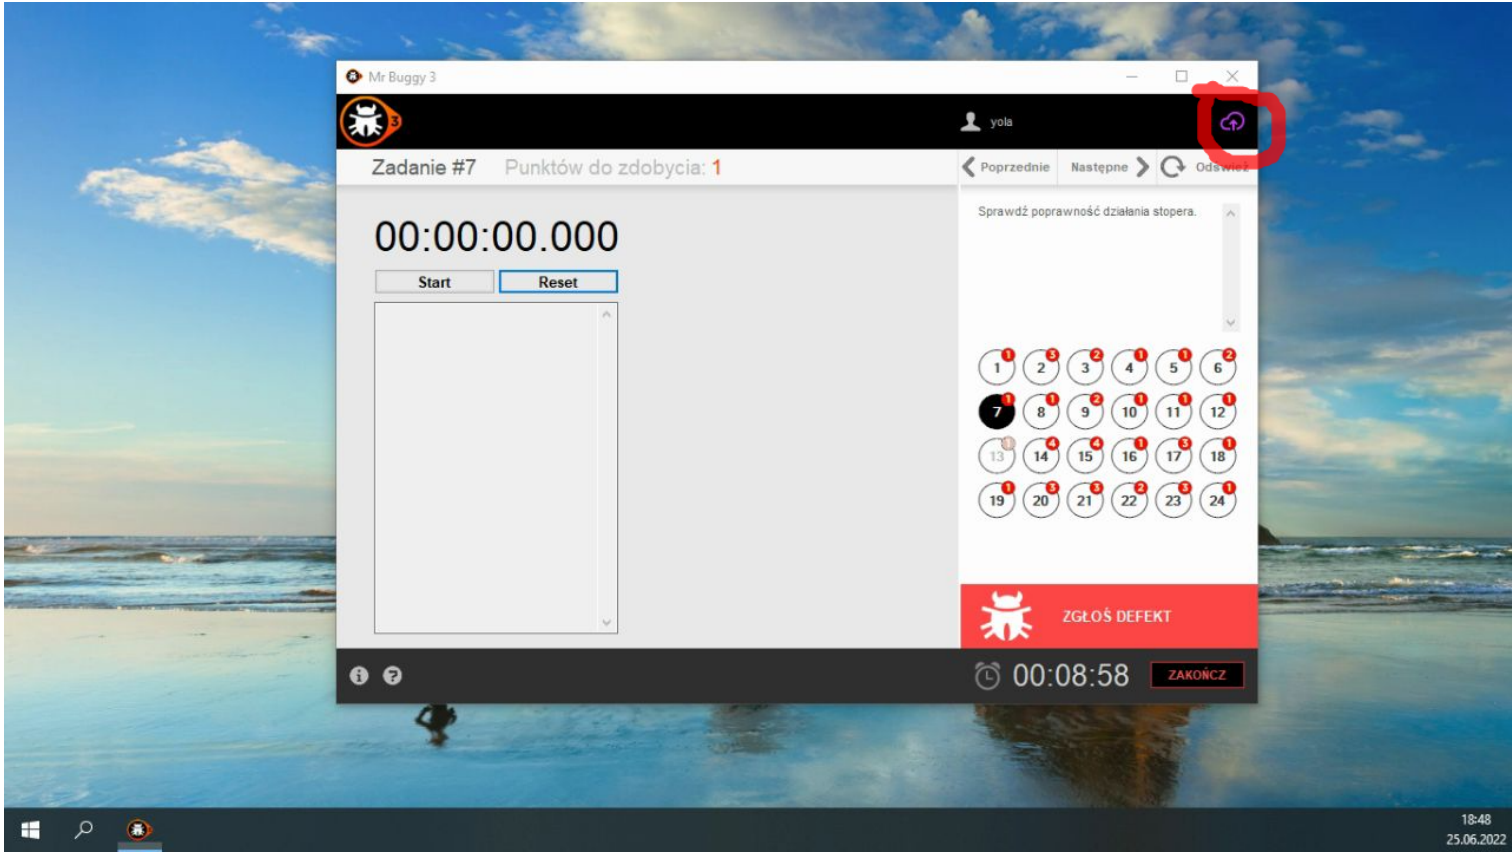

There are all elements of the layout: The task, how many points can be scored, the logo of MrBuggy3, next/previous buttons, the description the task/exercise, report defect button, the finish button

00:09:14 | Video • Problem

A defect concerning next/previous buttons. If the clicking is too fast, the buttons work every second click.

00:11:10 | Screenshot • Comment

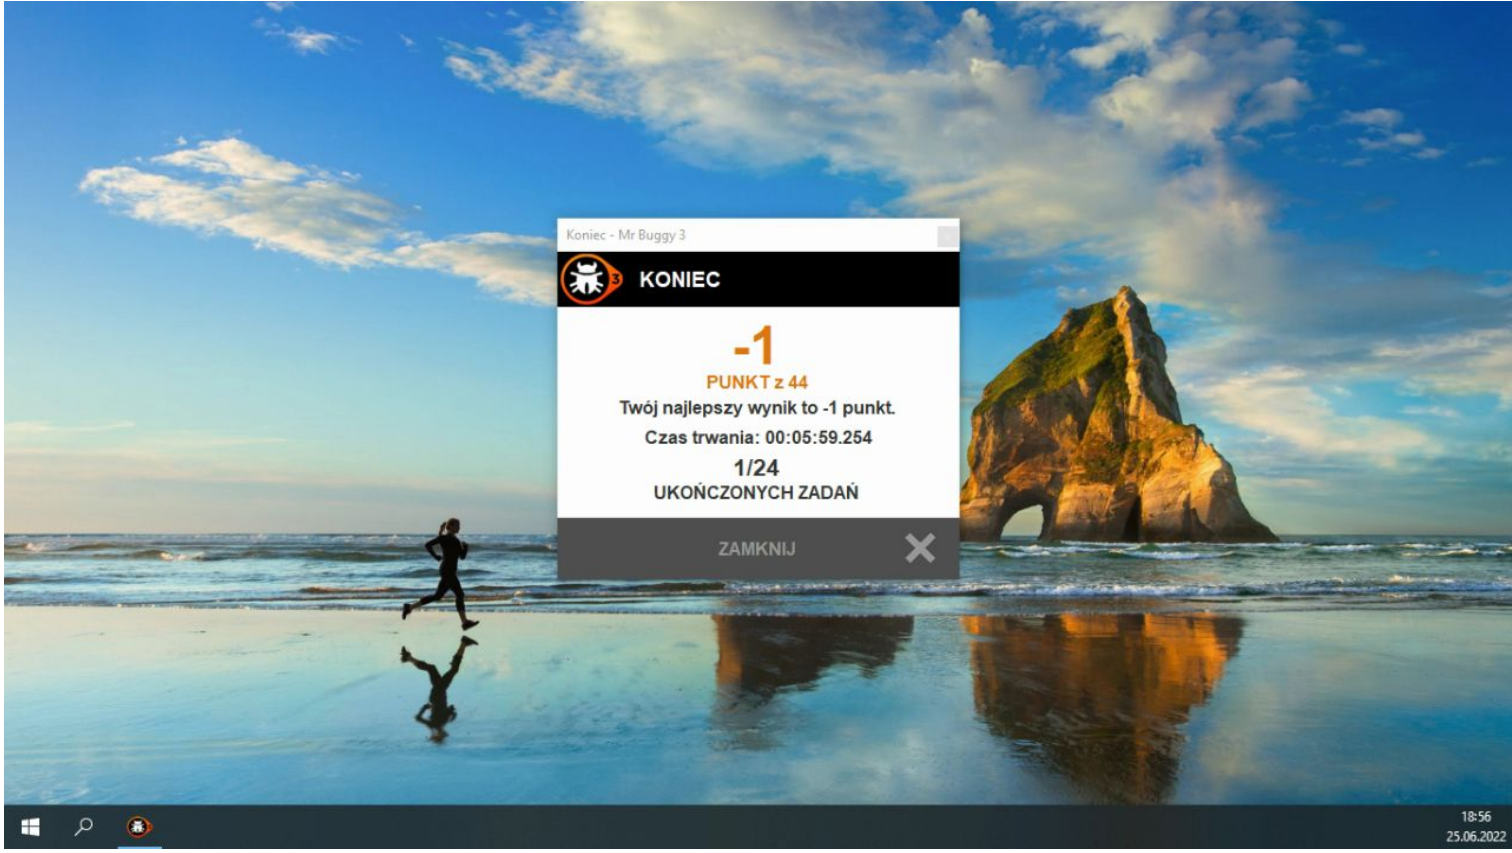

It's impossible to export data, the button doesn't work.

00:13:34 | Note • Problem

After finishing and reopening the app, even though my score is remembered as a registered user, I can do the tasks all over again - that wasn't supposed to be like that. The app should archive the tasks done.

00:18:49 | Screenshot • Comment

The app deducts one point instead of two for a wrong answer.

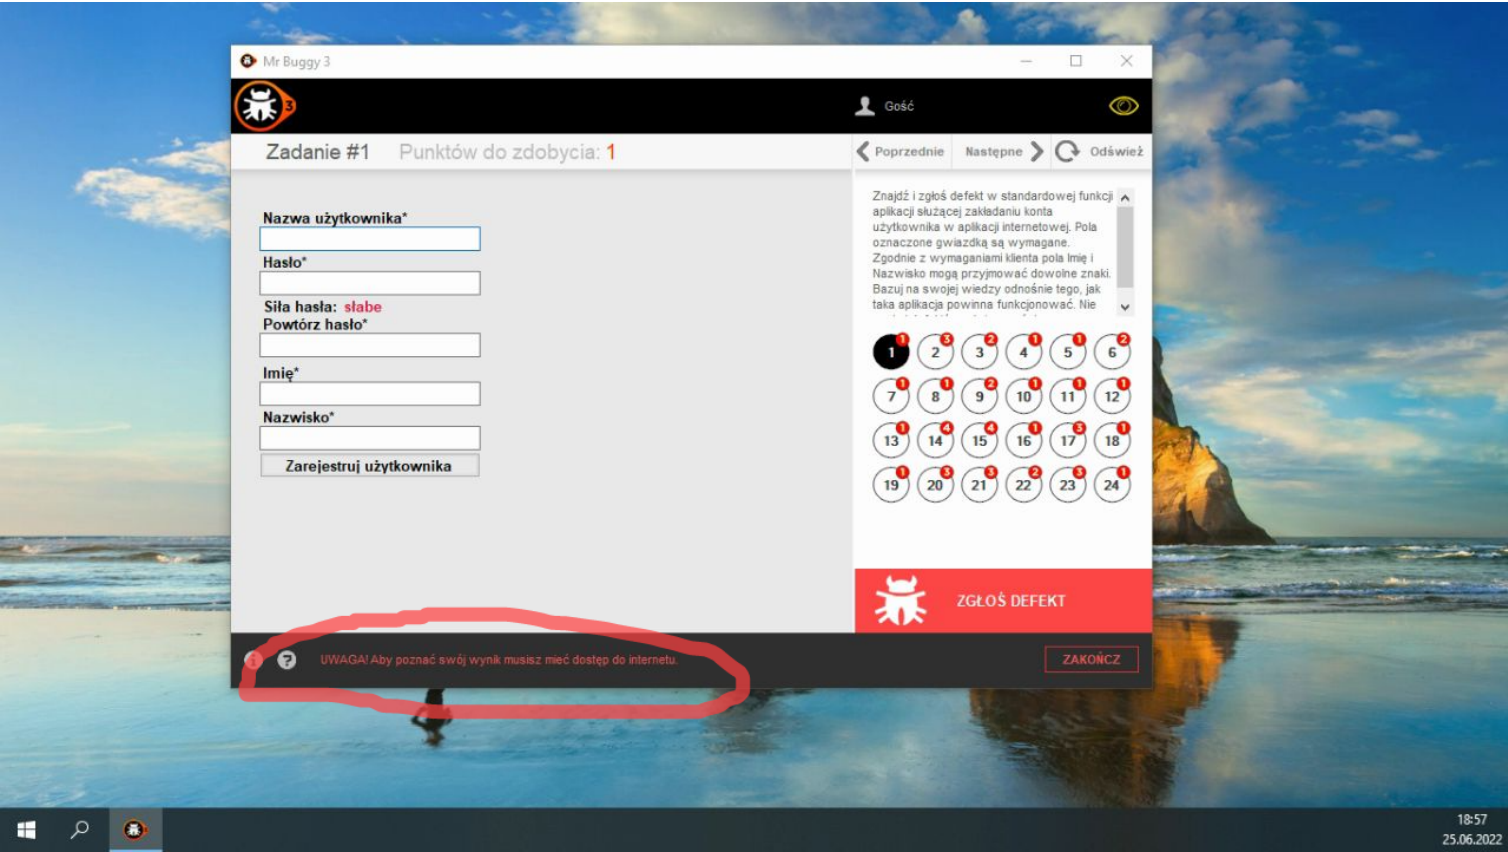

00:19:18 | Note • Comment

No, I run the app in guest mode.

00:20:21 | Screenshot • Comment

The app informs that I have no access to the Internet, which is false. Might be connected with the guest mode.

00:23:43 | Note • Comment

The app uses up to 60MB of RAM

Session ended • Duration 00:23:47 19h02 | 25-06-2022
